

**You and us – fits perfectly!**

# Sealing experts with passion.

Solutions for every sealing problem? We have: **Because with 5,490 sealing profiles, we offer you the most extensive sealing program. Made in Germany.** And where that's not enough, we go one step further and develop what you need. With the expertise to make even unusual projects a success. Customised and with consistently high quality.

## Welcome to the GfA!

As an owner-managed family business with 45 years of company history, we are

experts in the sealing business. What our customers want and need determines our work. With over 100 employees at our "home port" of Marxen, south of Hamburg, we are a reliable partner for our customers from industry, trade and processing with a wide range of sector backgrounds. Personality counts – that's why we are increasingly present internationally with additional locations in Denmark, the Netherlands and South Africa, so that we can respond to your wishes individually and in direct dialogue.

Managing Director Lars Hagemeyer

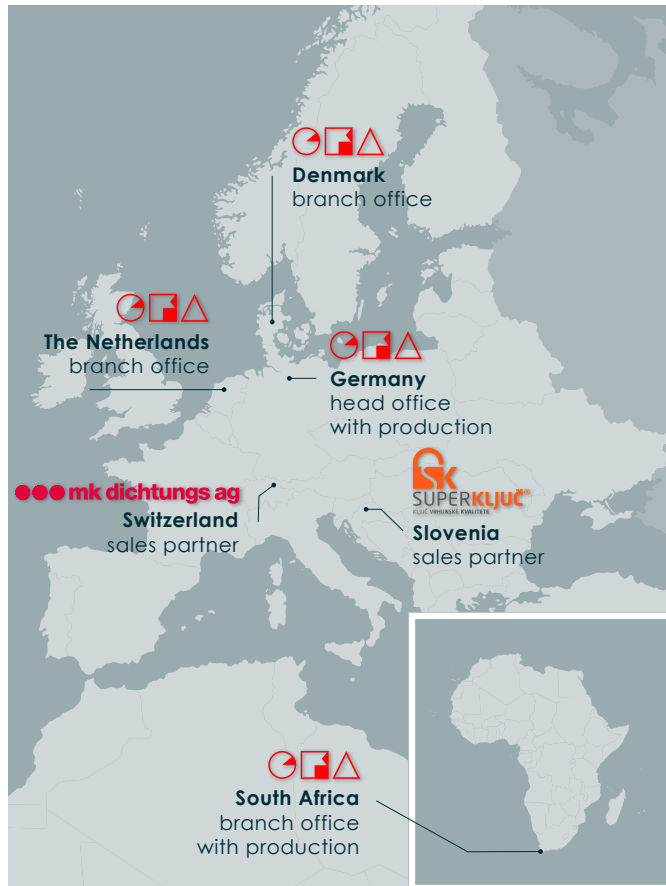

## We make it fit.

You need – we deliver. Over 1 million metres of sealing profiles are always available from stock. 17 extrusion lines in two halls ensure supplies, metre by metre: You can order standard seals, e.g. for the energy-efficient refurbishment of windows and doors, from as little as 5 metres. **We make sealing profiles possible for the most unusual applications thanks to our in-house toolmaking, 3D printer and rapid prototyping!** This allows us to create individual profiles from as little as 200 metres – in all RAL colours, soft PVC, TPE-S, TPE-V or silicone rubber, surface-treated or with additives as required. This turns your sealing profile into a real expert.

# Specialists in action – customised for you.

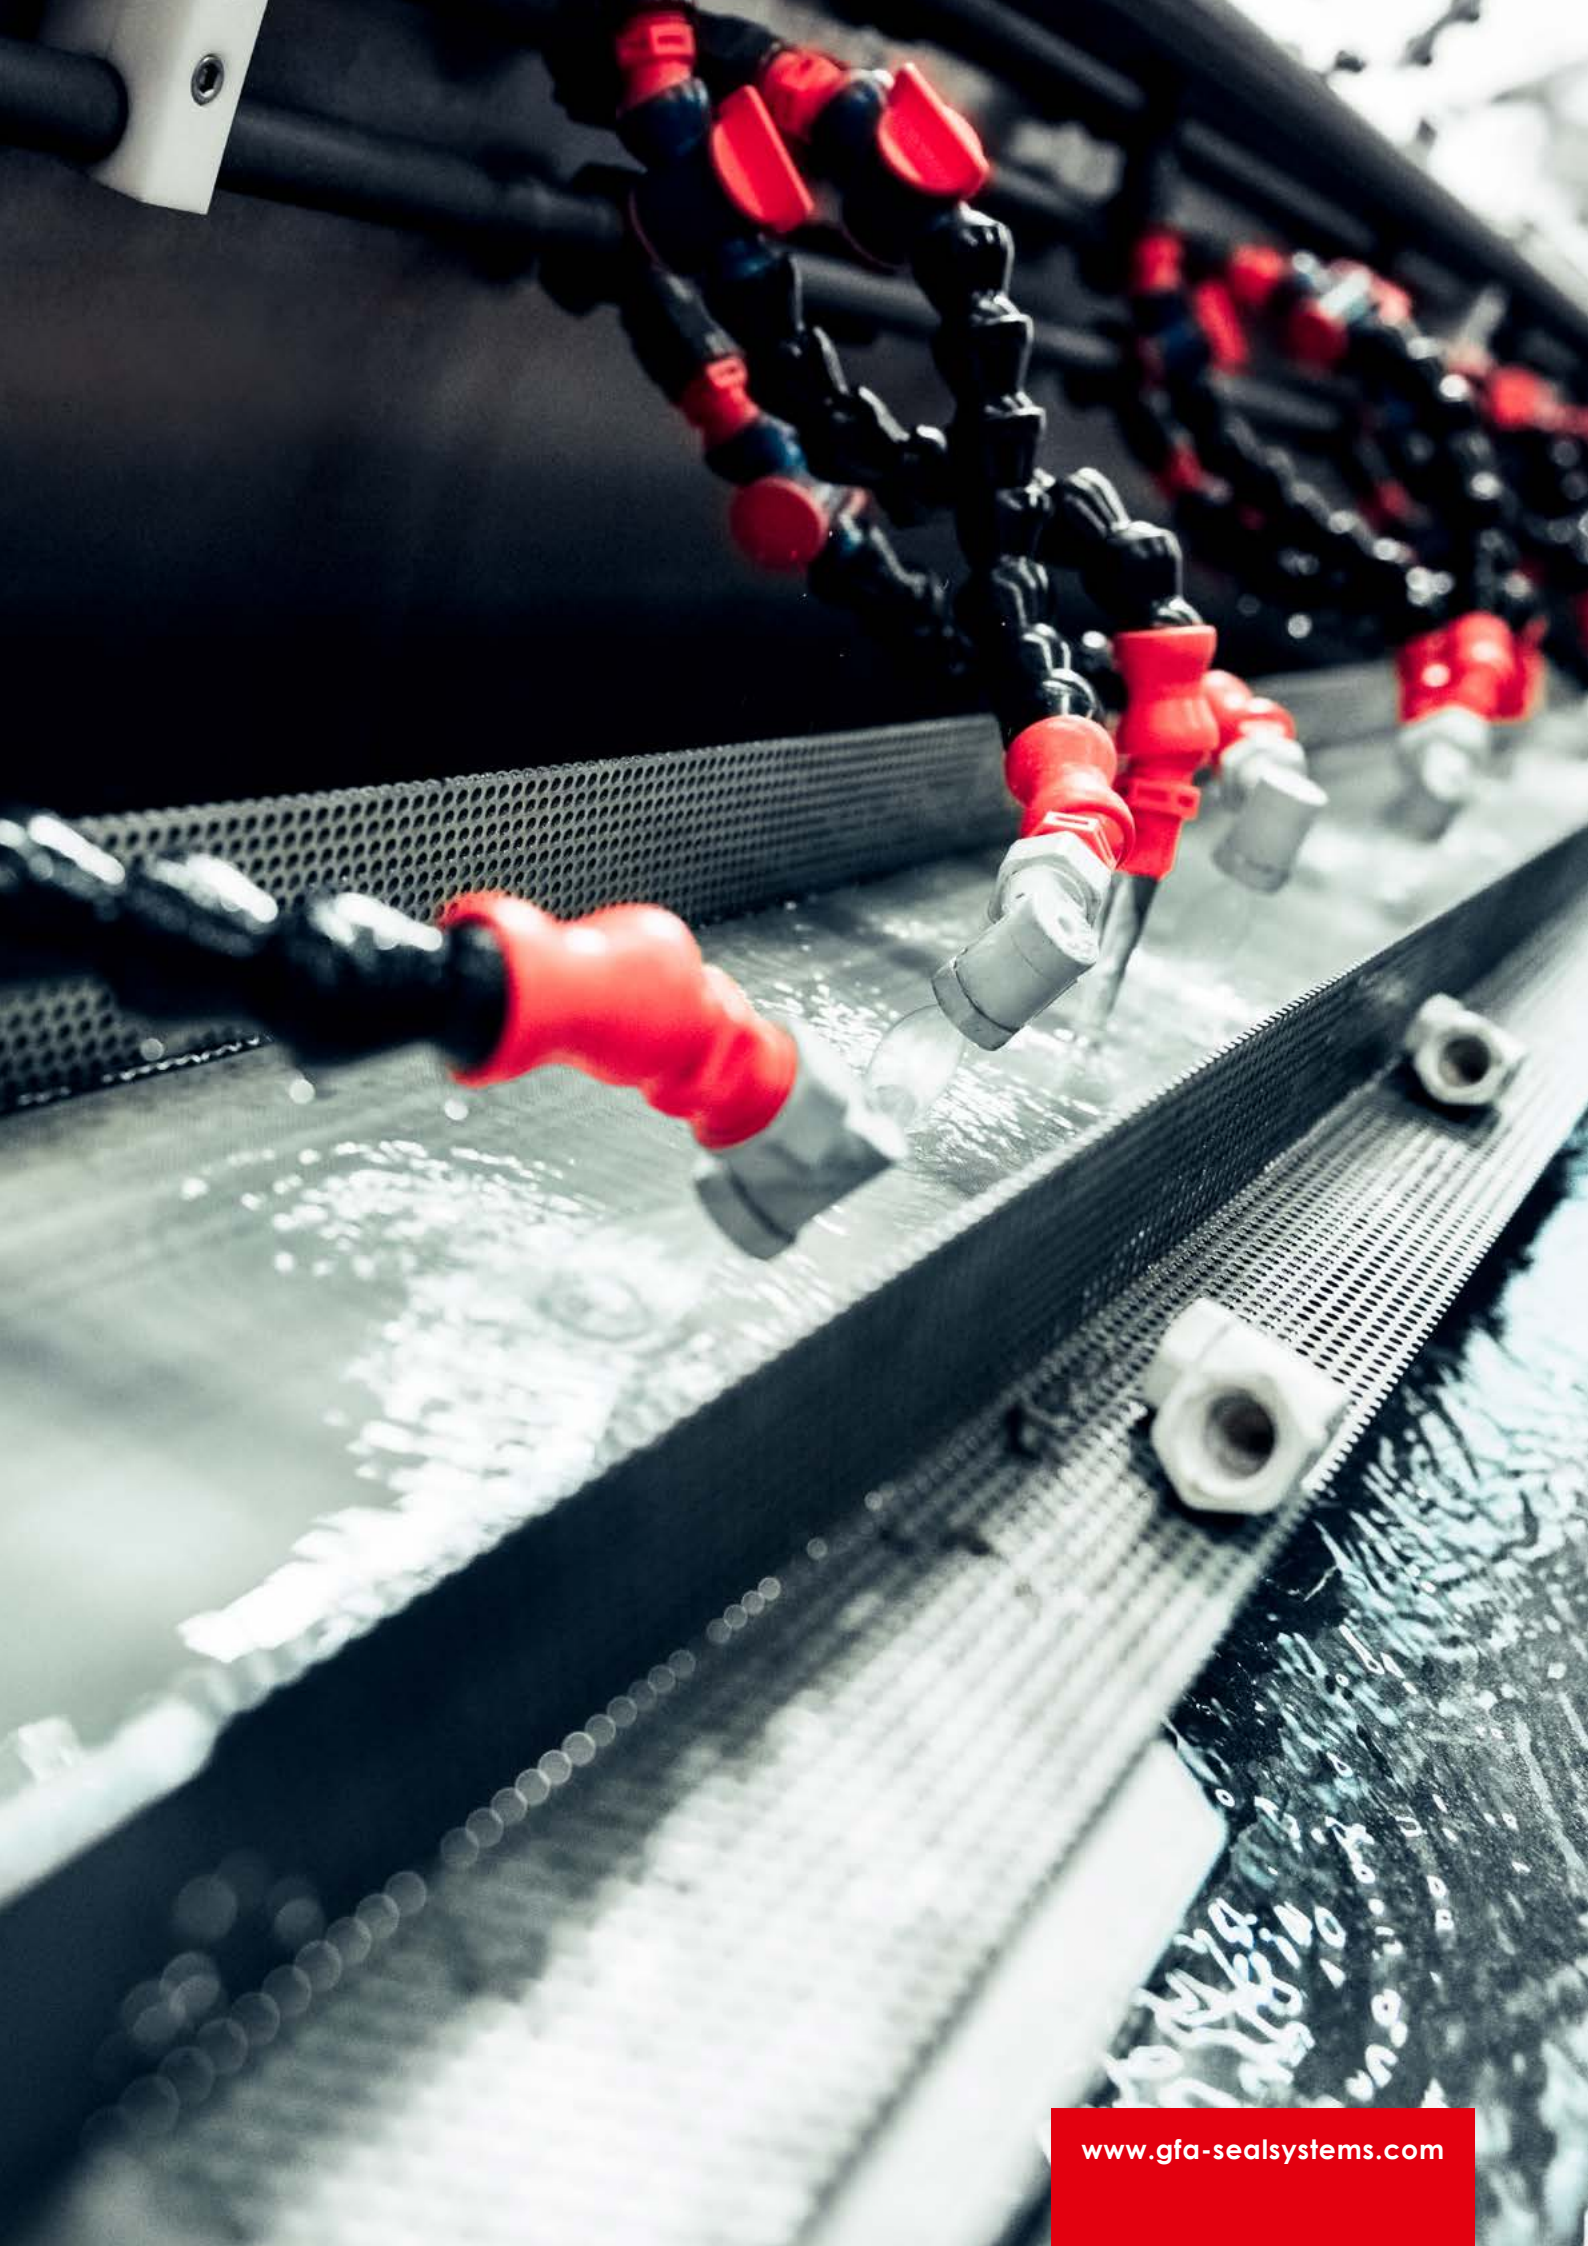

There is not *this one* sealing profile. But there is the right sealing profile for your specific application. This is where your profile gets the perfect shape.

By the way: The **GfA Group** is also in really good shape. Over the years, the idea of manufacturing sealing profiles to perfection has turned a family business into a family of companies. We set priorities in order to fulfil your requirements in the best possible way – what can we do for you?

- **GfA-Dichtungstechnik Joachim Hagemeier GmbH** – Development, die construction and production of sealing profiles made of soft PVC and various TPE variants
- **GfA-Dichtungen GmbH** – Specialist in all aspects of renovation seals, with a huge stock of more than 1 million metres
- **GfA-Service GmbH** – Production of welded sealing frames and corners and specialist for all aspects of special profiles
- **GfA-SiliTech GmbH** – Development, die construction and production of sealing profiles made of silicone rubber
- **GfA-Group GmbH** – Central holding company for administration and further development; holding the subsidiaries and branches together

## ... and international:

- **GfA-SealSystems Pty. Ltd., Südafrika** – Production and distribution of sealing profiles for the African market
- **GfA-SealSystems West B.V., The Netherlands** – Distribution of GfA products in France, Belgium, Luxembourg and the Netherlands
- **GfA-SealSystems Scandic** – Distribution of GfA products in Denmark, Sweden, Norway and Finland

# Smart thinking, cleverly done.

Finding solutions, thinking outside the box, making existing products even better – again and again: innovations made by GfA. With new ideas in production technology and the desire to offer our customers the best service, we continue to develop the world of gaskets. The result: profiles with that certain something extra. Material compositions that combine the best properties. Simplified handling. Profiles that can do exactly what you need! Want some examples?

## **Frames and corners – optimally customised.**

Only when profiles are fitted into corners with millimetre precision is it really tight. Our ready-welded sealing frames and corners make installation easy and the result perfect. And for almost all window systems.

## **Anti-stretching thread – seamlessly tight.**

Lengthening and subsequent gaps? Not with us! The anti-stretching thread embedded in the profile prevents the seal from contracting again after mechanical stress during installation. The anti-stretching thread is available for many GfA standard profiles from an order quantity of 5 metres.

### **2-component seals – well combined.**

Different properties that complement each other perfectly: this is the recipe for our 2K sealing profiles. Here, similar materials with different hardnesses are combined in one profile. The harder part makes installation easier.

### **Surface treatments – it gets even better.**

Have you found what you are looking for in our wide range of materials, but the surface properties are not right? No problem, because profile surfaces can be optimised for your application with a wide variety of treatments, while retaining all the good characteristics of the selected material. Anti-friction coating, flock strips, self-lubrication and fluorination are just four of many examples of how we can improve handling or durability, for example.

### **Self-adhesive? Of course!**

As support during installation, for retrofitting older building elements: We equip almost every sealing profile with self-adhesive strips. Also in the GfA programme: everything for optimum pre-treatment of the surface to be bonded.

### **Additives – from sealing profile to multi-talent**

Increased resistance to fungal growth, improved fire behaviour – or what should your sealing profile be able to do? Depending on the requirements, profiles can be equipped with special additives that optimise the properties of the gasket material for its application. We make possible what you need.

## Information, service, advice – always!

No “really tight” without GfA – everyone needs to know that! Our **new catalog 2024** contains almost 600 pages of all sealing profiles, tools, accessories and interesting facts – also available as an online catalog on our website [www.gfa-sealingsystems.com](http://www.gfa-sealingsystems.com)

We also provide you with extensive **advertising material** via QR code and with just a few clicks: Order a free counter display, sample box and order pads and get inspired for on-site placement in retail. Do you value personal dialogue? Then we'll send our **field consultant** to you!

contact here.

## Partner to the industry: at work for you

Consistently high product quality, precision and continuous improvement are of the utmost importance to our industrial customers. You can count on us as your reliable partner.

**Benefit from our in-depth knowledge of the industry, our experience and our innovative energy:** together with you, we analyse where existing systems can be optimised, develop new alternatives and give shape to your ideas. Customised, made in Germany.

# Point for point for GfA – What you find with (good about) us

- ▲ 5.490 sealing profiles in the program
- ▲ Stock seals available from 5 metres
- ▲ 17 extrusion lines
- ▲ 2,390 m<sup>2</sup> production area
- ▲ 3,000 m<sup>2</sup> storage area
- ▲ Customised sealing profiles from 200 metres
- ▲ 45 years of experience
- ▲ 100 employees including our own specialist consultants in the field
- ▲ Resource-saving production through closed water cycle and waste recycling
- ▲ Sustainable and independent energy generation with combined heat and power plant and photovoltaic system
- ▲ Production in Marxen (Northern Germany) and Cape Town (South Africa)
- ▲ International agencies in South Africa, Denmark (for Scandinavia), the Netherlands (for Benelux)
